About me

Driven by a strong interest in technology, I am pursuing a career in the IT field. My experience spans Data Science, Artificial Intelligence, and Web Development. I am seeking opportunities to contribute to projects in both research and real-life applications of Artificial Intelligence or Data Science.

Education

BSc in Artificial Intelligence [University of Science, VNU-HCM](#) **HCM, Vietnam** 2021–2025

- GPA: 9.08/10 — Top 2 students in Artificial Intelligence, First Graduating Cohort (June 2025).
- Selected to represent the first graduating cohort (June 2025) of the Artificial Intelligence program at the University of Science, VNU-HCM, at the commencement ceremony.

MSc in Artificial Intelligence [University of Science, VNU-HCM](#) **HCM, Vietnam** 2025–Present

- Currently pursuing a Master's degree in Artificial Intelligence.

Experience

University of Information Technology, VNU-HCM ([Teaching Assistant](#)) **HCM, Vietnam** Oct 2025 - Present

- Teaching courses such as *Artificial Intelligence for Networking and Communications*, *Introduction to Computer Networks*, etc.
- Contributed to research projects with the IEC Research Group, with a focus on AI Model Security.
- Participated in academic and administrative activities, including exam proctoring, grading, and organizing student activities.

Voyager IT Inc., ([Ruby on Rails Developer - Intern](#)) **HCM, Viet Nam** Nov 2022 - Jan 2023

- Developed features for an E-commerce project using Ruby on Rails, Bootstrap, PostgreSQL, and Docker.
- Contributed to company projects, working with Rails APIs, building SNS Login and Authentication, and writing documentation.
- Participated in internal technology presentations, learning new stacks such as React.js and FastAPI.

IEC Research Group, ([AI Researcher - Intern](#)) **HCM, Viet Nam** Jan 2023 - Present

- Conducted extensive research on Cybersecurity (rumor detection, deep learning security), exploring relevant literature and implementing state-of-the-art approaches from academic papers.
- Developed a novel model using Graph Neural Network (GNN) for rumor detection, a defense method for dropout attack, and investigated the impact of Bit-Flip Attacks in Collaborative Inference. Collaborated with a research team to validate the model's performance, analyze results, and refine the approach further.
- Synthesize research findings, present, write, and submit papers to international journals and conferences.

Skills

- **Programming & Software:** Python, Ruby, C++, SQL, Ruby on Rails, Bootstrap, FastAPI, Flask, Docker.
- **Machine Learning & Deep Learning:** Experienced in developing and implementing supervised and unsupervised ML algorithms. Skilled in using Python libraries (Scikit-learn, NumPy, Pandas) and frameworks (TensorFlow, PyTorch).
- **AI/Computer Vision & NLP:** Proficient in Natural Language Processing techniques (text classification, sentiment analysis, machine translation, auto-correct, RAG, chatbot development) and Computer Vision concepts (Digital Image/Video processing, Object detection, Segmentation, Basic tracking, using OpenCV in C++/Python).

Selected Manuscripts and Submissions

- **MTAS: A Temporal-Aware Multiview Graph Attention Framework for Early Rumor Detection on Social Media**
 - Authors: **Hoang-Trung Le-Pham**, The-Phong Nguyen, Anh-Duy Tran, and Kim-Hung Le
 - Published in **Information Fusion**, Impact Factor 15.5, vol. 126, Article 103598, 2026.
 - DOI: <https://doi.org/10.1016/j.inffus.2025.103598>

- **Investigating the Vulnerability of Deep Neural Network to Bit-Flip Attacks in Collaborative Inference Systems**
 - Authors: Nhu-Y Tran Van, **Hoang-Trung Le-Pham**, Huy-Tan Thai, and Kim-Hung Le
 - Accepted by **CITA 2025** (forthcoming).
- **A Dual-Layer Defense Mechanism for Dropout Attack in Wireless Link Estimation**
 - Authors: Huy-Cuong Nguyen, **Hoang-Trung Le-Pham (co-first author)**, Xuan-Ha Nguyen, Khanh-Hoi Le-Minh, and Kim-Hung Le
 - Published in **Computational Collective Intelligence**, Springer Nature, 2026, pp. 169–183.
 - DOI: https://doi.org/10.1007/978-3-032-09321-9_12
- **Dropout Attacks on Knowledge Distillation**
 - Authors: Duc-Tai Nguyen, Tra-My Le-Doan, **Hoang-Trung Le-Pham**, and Kim-Hung Le
 - Published in **Proceedings of the 2025 International Conference on Multimedia Analysis and Pattern Recognition (MAPR 2025)**, pp. 1–6.
 - DOI: <https://doi.org/10.1109/MAPR67746.2025.11133957>

Projects

- **Voyager E-Commerce Web (Software):**
 - Work as a Full-stack Developer. Voyager is an online shoe-shopping site. This is my internship project, which I worked on independently for over two weeks.
 - Technology used: Ruby on Rails for Backend; HTML, CSS, Bootstrap for Frontend; Docker to set up the project and deploy it to Heroku.
 - Link Github: <https://github.com/Trunkg0d/Voyager-shopping-cart>
- **Tool to identify Text Similarities in local corpus (Natural Language Processing):**
 - Work as an AI Engineer and Team Leader (team size 4). Build a tool to determine whether one (or more) input texts have sentences similar to existing texts in the existing text corpus, display and colour similar sentences, and display the percentage of similar sentences. Build in two ways: From scratch with the Siamese Network Model and the other way with Fine-tuning the Pretrained Model. This is the final project assignment for the course Introduction to Natural Language Processing.
 - Technology used: Python, PyTorch, Hugging Face model, Streamlit, PyQt5.
 - Link Github: https://github.com/Trunkg0d/Text_Similarities_Tool
- **Image Transform Web (Computer Vision):**
 - Work as a Web Developer (team size 2). The website allows changing colours, creating different shapes, smoothing things, and even finding the edges of objects. This is the practical project assignment for the course Digital Image Processing and Digital Video Processing.
 - Technology used: Python, Flask.
 - Link Github: https://github.com/Trunkg0d/Image_Transform_Web

Languages

- **English** [TOEIC certificate in 4 skills]
- **Vietnamese** [Native]
